

1. Creation of a service for processing of sensitive data. A combo of technical methods and procedures to simplify Estonian universities to work with private sector or non-public data sets. I'm attaching a short diagram with a high-level idea below (SAPU - Sensitiivsete andmete privaatne uurimiskeskond). We are currently on the idea level so it might be a very good time to join if this makes sense. The work assumes integration with ETAIS self-service to make it possible for anybody to request such an environment with a click of a button.
